INTRODUCTION

Children are the future of the country .If we turn the pages of history we found that no country reaches its peak by ignoring its children. As Dr.A.P.J Abdul Kalam once stated that in order to make India a developed nation the greatest weapon lies in the hands of the children. But one of the greatest problems faced by Indian educational system is intellectual backwardness of the students .it is in fact a great challenge that our society is facing today.

Educating in a normal school with special classes are all out-dated now. These are all illegal and prohibited as per the constitutional amendments. Mentally retarded are no more called retarded. The terminology is under their dignity. They are called now intellectually disabled as per 2016 Act. They are to be included in non disabled. So our topic intellectual disability and inclusive education is a latest and modern topic for a national seminar.

Why would we separate, segregate and alienate children from one another. Respect the differences .This is the clarion call of present day society

It is every child's right to be included.Inclusive education is a child's right not a priviledged.The individual with disabilities education act clearly states that all children with non disabled children. All children learn by being together. In inclusive education children both abled and disabled develop friendship and learn social skills.

The education and psychology department of this college organized the national seminar on 28th and 29th December 2018.
